

White Knight

Glitter Spray Fact Sheet

Glitter Spray is easy to use and produces a sparkling finish with no mess, no fuss and no glue.

Suitable Surfaces

Ideal for use on metal, glass, plastic, polystyrene, ribbon, paper, fresh and artificial flowers, wreaths, pine cones, candles and pottery.

Preparation

The surface must be thoroughly cleaned and free from grease, oil, dirt and other surface contaminants. Lightly sand previously painted and glossy surfaces for maximum adhesion. Before Spraying: Cover nearby areas to protect from overspray. Shake the can for one minute after the mixing ball rattles to ensure colour uniformity. Shake occasionally during use. For best results, use only when temperature is between 15C and 30C.

Application Details

Hold the can upright approximately 25cm from the surface. Glitter is best applied using short bursts rather than a continuous spray pattern.

Coverage

Up to 1 - 1.5 square metres per unit depending on the nature of the surface and the amount of overspray.

Drying Times

Touch dry 10 minutes. Re-Coat: After 7 - 10 minutes. Drying times will be slower in cold or humid conditions, in the absence of ventilation or where heavy film builds are applied.

Health and Safety

Refer to Material Safety Data Sheet available by request on 131 686.

Pack Sizes

165g spray
